

Company Profile

About Us

JBL is an engineering company established in April 2007, specializing in telecommunications infrastructure installation and power system solutions. Our core services include telecom site electrical installations, tower and base station support systems, power supply and backup solutions, equipment installation, and ongoing maintenance services.

We are committed to delivering high-quality, value-driven engineering solutions by building strong and lasting partnerships with our clients. From system design and procurement to installation, commissioning, and maintenance, **JBL** ensures precision, safety, and reliability at every stage of project execution. Our focus is to provide dependable electrical and telecom infrastructure that supports seamless connectivity and long-term operational performance.

Our Mission

Our mission is to deliver high-quality electrical engineering, technical management, and telecommunications infrastructure solutions that meet and exceed our clients' expectations.

How We Achieve This

We are committed to building long-term partnerships with our clients by consistently delivering safe, reliable, and timely services while proactively anticipating their evolving needs.

We uphold strict safety standards in every aspect of our operations, ensuring compliance, risk management, and protection of people, assets, and the environment.

To fulfill this mission, we foster a culture of fairness, professionalism, and continuous improvement by empowering our employees and involving them in quality assurance processes. Through teamwork, innovation, and efficiency, we ensure cost-effective project execution without compromising standards.

Our Core Values

Integrity & Honesty

We conduct all our operations with transparency, accountability, and professionalism, building trust with clients, partners, and stakeholders.

Safety first

We are fully committed to safe operations by strictly adhering to industry safety standards and implementing best practices that protect our people, clients, and the environment.

Ethical Business Practices

We uphold the highest ethical standards in all our business dealings, ensuring fairness, compliance, and responsible decision-making.

Customer-Centered Approach

We treat our clients with respect and consideration, taking time to understand their needs and delivering solutions that add real value.

Commitment to Excellence

We strive for the highest standards in engineering quality, service delivery, and customer care, ensuring every project is executed with precision and professionalism.

“

*We build lasting connections through
integrity, safety, and an
uncompromising commitment to
excellence*

Our Services

- ✓ Alternative power solutions (Solar, Inverter systems etc)
- ✓ Telecommunications (We also offer FTTH - Fiber to the home)
- ✓ FTTP - Fiber to the premises, Fiber survey, design and implementation
- ✓ BTS sites operations and maintenance as SMC
- ✓ Transmission links installation and maintenance
- ✓ Energy and power systems integration, maintenance and dimensioning
- ✓ Auxiliary technical materials and equipments supply and integration
- ✓ Access to network routine maintenance
- ✓ Installation of CCTV cameras
- ✓ Installation and maintenance of elevators.
- ✓ Supply both electrical and mechanical products, etc.

Past Projects

1. Telecom Base Station Power Upgrade

Upgraded electrical and backup power systems across multiple telecom base stations, including panel installations, grounding, and commissioning.

The project improved network uptime and reduced power-related faults while maintaining zero safety incidents.

2. Fiber Hub Electrical & Infrastructure Setup

Installed structured cabling, power distribution systems, UPS integration, and equipment racks for a metropolitan fiber distribution hub. Successfully commissioned the facility to support thousands of subscribers with high reliability.

3. New BTS Site Electrical Installation

Executed full electrical installations for newly constructed telecom tower sites, including generator systems, battery banks, shelter wiring, and earthing systems. Delivered compliant, reliable infrastructure supporting network expansion.
